Effects of cereal bars for breakfast and mid morning

The aim of the present study was to examine the effects of consuming cereal bars, given either for breakfast or a mid-morning snack, on mood and memory. Thirty-two volunteers (16 males, 16 females; mean age, 20 years 9 months) were randomly assigned to one of four groups formed by combining breakfast (cereal bar versus no breakfast) and snack (cereal bar versus no snack) conditions.

Mediation and Moderation of the Relationship Between

The present study examined specific aspects of individuals personal strivings as mediators, and religious tradition as a moderator, of the relationship between intrinsic religiousness and mental health. In a sample of 268 university students, the negative relationship between intrinsic religiousness and hostility was mediated by the degree of sanctification within individuals strivings.
