### **Targeted drug delivery Wikipedia**

Targeted drug delivery, sometimes called smart drug delivery, is a method of delivering medication to a patient in a manner that increases the concentration of the medication in some parts of the body relative to others. This means of delivery is largely founded on nanomedicine, which plans to employ nanoparticle-mediated drug delivery in order to combat the downfalls of conventional drug

### **Molecularly Imprinted Polymers Novel Discovery for Drug**

Background: Molecularly imprinted polymers (MIP) are novel carriers synthesized by imprinting of a template over a polymer. This paper presents the recent application of MIP for diagnostic and therapeutic drug delivery. Overview: MIP owing to their 3D polymeric structures and due to bond

formation with the template serves as a reservoir of active causing stimuli sensitive, enantioselective
