Models of Mind That Are Implied by Cognitive Science

A mind is life; cognition is life (The branch of cognitive science that is currently active in the research of self-awareness is neurophenomenology). Within this paradigm, two different proposals were made to explain the nature of interactions and how those interactions play a role in the interpretations of the world.

The Embodied Mind The MIT Press

The Embodied Mind provides a unique, sophisticated treatment of the spontaneous and reflective dimension of human experience. The authors argue that only by having a sense of common ground between mind in Science and mind in experience can our understanding of cognition be more complete. Mind Body World Foundations of Cognitive Science Open

Cognitive science arose in the 1950s when it became apparent that a number of disciplines, including psychology, computer science, linguistics, and philosophy, were fragmenting. Perhaps owing to the field's immediate origins in cybernetics, as well as to the foundational assumption that cognition is information processing, cognitive science initially seemed more unified than psychology.
