Royaldee Capsules is a modified-release formulation of 25-hydroxyvitamin D₃ (calcifediol) being developed as a new monotherapy to treat secondary hyperparathyroidism (SHPT) associated with vitamin D insufficiency in patients with Stage 3 through 4 chronic kidney disease (CKD).

<http://home.schoolnutritionandfitness.com/Modified-release-active-Vitamin-D--calcifediol-for-those--.pdf>

Modified Release Calcifediol Effectively Controls

The present study evaluated a novel investigational vitamin D repletion therapy: a modified-release (MR) formulation of calcifediol designed to raise serum 25-hydroxyvitamin D in a gradual manner to minimize the induction of CYP24 and, thereby, improve the SHPT control.

<http://home.schoolnutritionandfitness.com/Modified-Release-Calcifediol-Effectively-Controls--.pdf>

Modified release oral calcifediol corrects vitamin D

A modified-release (MR) oral formulation of calcifediol (25-hydroxyvitamin D₃) was developed which raised serum 25-hydroxyvitamin D₃ and calcitriol levels gradually. Single doses of either bolus intravenous (IV) or oral MR calcifediol were administered to vitamin D deficient rats.

DailyMed RAYALDEE calcifediol capsule extended release

RAYALDEE (calcifediol) extended-release capsules, for oral use Initial U.S. Approval: 2016
INDICATIONS AND USAGE RAYALDEE is a vitamin D₃ analog indicated for the treatment of secondary hyperparathyroidism in adults with stage 3 or 4 chronic kidney disease and serum total 25-hydroxyvitamin D levels less than 30 ng/mL.

<http://home.schoolnutritionandfitness.com/DailyMed-RAYALDEE--calcifediol-capsule--extended-release.pdf>

Extended release calcifediol for secondary

3), the endogenous active vitamin D hormone. ERC capsules have a lipophilic fill which gradually releases calcifediol, corrects vitamin D insufficiency and increases serum calcitriol and thereby suppresses production of parathyroid hormone (PTH) in CKD patients without perturbing normal vitamin D and mineral metabolism.

<http://home.schoolnutritionandfitness.com/Extended-release-calcifediol-for-secondary--.pdf>

Calcitriol calcifediol ratio An indicator of vitamin D

Calcifediol (25D) availability is crucial for calcitriol (1,25D) synthesis, but regulation of vitamin D hydroxylases is majorly responsible for 1,25D synthesis. The net efficiency of vitamin D hydroxylases might be informative. We assume that the ratio

<http://home.schoolnutritionandfitness.com/Calcitriol-calcifediol-ratio--An-indicator-of-vitamin-D--.pdf>

Calcifediol Uses Side Effects Warnings Drugs com

Vitamin D is important for the absorption of calcium from the stomach and for the functioning of calcium in the body. Calcifediol is used to treat hyperparathyroidism (overactive parathyroid glands) in people who have stage 3 or 4 chronic kidney failure and low vitamin D levels. Calcifediol is not for people who are receiving dialysis.

Calcifediol 25 Hydroxy Vitamin D a Provitamin

June 28, 2019 Calcifediol or 25 Hydroxy-vitamin D is the 25-Hydroxylated form of vitamin D, that requires an additional hydroxylation in the kidneys to be fully active. It is used to treat secondary hyperparathyroidism in adults with vitamin D deficiency or insufficiency and stage 3 4 chronic kidney disease.

<http://home.schoolnutritionandfitness.com/Calcifediol--25-Hydroxy-Vitamin-D--a-Provitamin--.pdf>

Extended release calcifediol for secondary

Introduction : Extended-release calcifediol (ERC) 30 g capsules were recently approved as Rayaldee by the United States Food and Drug Administration (FDA) for the treatment of secondary hyperparathyroidism (SHPT) in adults with stage 3 4 (not 5) chronic kidney disease (CKD) and vitamin D insufficiency (serum total 25-hydroxyvitamin D < 30 ng/mL).

<http://home.schoolnutritionandfitness.com/Extended-release-calcifediol-for-secondary--.pdf>

Modified Release Calcifediol Corrects Vitamin D Deficiency

Calcifediol is an overlooked therapy that reliably corrects vitamin D insufficiency by raising serum levels of 25-hydroxyvitamin D. The modified-release formulation is designed to correct vitamin D insufficiency in a gradual (rather than abrupt) manner, which makes the product more effective.

<http://home.schoolnutritionandfitness.com/Modified-Release-Calcifediol-Corrects-Vitamin-D-Deficiency--.pdf>

Role of Vitamin D in Uremic Vascular Calcification

Recently, a modified-release oral formulation of calcifediol was designed to gradually raise serum 25-hydroxyvitamin D to minimize the induction of CYP24 (the cytochrome P-450 enzyme that specifically catabolizes vitamin D and its metabolites) and was found to reduce iPTH more effectively in patients with secondary hyperparathyroidism .

<http://home.schoolnutritionandfitness.com/Role-of-Vitamin-D-in-Uremic-Vascular-Calcification.pdf>

Calcifediol Professional Patient Advice Drugs com

Calcifediol, a prohormone of the active form of vitamin D 3, calcitriol (1,25 dihydroxyvitamin D 3), is catalyzed to calcitriol by the 1-alpha-hydroxylase enzyme, CYP27B1, primarily in the kidney.

<http://home.schoolnutritionandfitness.com/Calcifediol--Professional-Patient-Advice--Drugs-com.pdf>

Royaldee Calcifediol Extended release Capsules Uses

Calcifediol (25-hydroxyvitamin D 3) is a prohormone of the active form of vitamin D 3, calcitriol (1,25-dihydroxyvitamin D 3). Calcifediol is converted to calcitriol by cytochrome P450 27B1 (CYP27B1), also called 1-alpha hydroxylase, primarily in the kidney.

<http://home.schoolnutritionandfitness.com/Royaldee--Calcifediol-Extended-release-Capsules-Uses--.pdf>

Vitamin D Calcitriol

Genetic defects in the vitamin D receptor: a number of different mutations have been identified in humans that lead to hereditary vitamin D resistance.. Severe liver or kidney disease: this can interfere with generation of the biologically-active form of vitamin D.. Insufficient exposure to sunlight: Elderly people that stay inside and have poor diets often have at least subclinical deficiency.

<http://home.schoolnutritionandfitness.com/Vitamin-D--Calcitriol-.pdf>

Calcifediol an overview ScienceDirect Topics

Vitamin D is a prohormone that is a precursor to numerous biologically active metabolites. Cholecalciferol is biotransformed to 25-hydroxycholecalciferol (calcifediol) in the liver and converted further to 1,25-dihydroxyvitamin D3 (calcitriol), the most potent form (Fig. 29-6).

<http://home.schoolnutritionandfitness.com/Calcifediol-an-overview-ScienceDirect-Topics.pdf>

Royaldee FDA prescribing information side effects and uses

Calcifediol (25-hydroxyvitamin D 3) is a prohormone of the active form of vitamin D 3, calcitriol (1,25 dihydroxyvitamin D 3). Calcifediol is converted to calcitriol by cytochrome P450 27B1 (CYP27B1), also called 1-alpha hydroxylase, primarily in the kidney.

Calcifediol Wikipedia

Calcifediol, also known as calcidiol, 25-hydroxycholecalciferol, or 25-hydroxyvitamin D (abbreviated 25 (OH)D), is a prehormone that is produced in the liver by hydroxylation of vitamin D 3 (cholecalciferol) by the enzyme cholecalciferol 25-hydroxylase. Physicians worldwide measure this metabolite to determine a patient's vitamin D status.

<http://home.schoolnutritionandfitness.com/Calcifediol-Wikipedia.pdf>

Calcifediol C27H44O2 PubChem

The major circulating metabolite of vitamin D3 (cholecalciferol). It is produced in the liver and is the best indicator of the body's vitamin D stores. It is effective in the treatment of rickets and osteomalacia, both in azotemic and non-azotemic patients. Calcifediol also has mineralizing properties.

<http://home.schoolnutritionandfitness.com/Calcifediol-C27H44O2-PubChem.pdf>

Clinical practice recommendations for native vitamin D

We present clinical practice recommendations for the use of native vitamin D therapy [ergocalciferol (vitamin D 2) and cholecalciferol (vitamin D 3)] in children with CKD Stages 2 5 and on dialysis (Stage 5D). This document covers recommendations for the assessment of vitamin D status, optimal levels of 25(OH)D and its monitoring, and

Vitamin D Immunomodulatory Role in Chronic and Acute Viral

Vitamin D is stored in muscle, adipose tissue, and liver. Its turnover is slow: a single massive load prevents vitamin D deficiency for 2-3 months (Vatan, 2011). The circulating concentration of active vitamin D is also regulated through its degradation.
