International Journal of Pharmaceutical and Medicinal

With the targeted drug delivery it becomes difficult to target the tumor cells. Advanced techniques and skilled persons are required. Sometimes it may causes toxicity and it is very difficult to maintain stability of dosage forms[10]. 3. Types of targeted drug delivery Targeted drug delivery may be of following types as discussed below.

TARGETING NEW POTENTIAL CARRIERS FOR TARGETTED DRUG

At present 95 percent of all new potential therapeutics have poor pharmacokinetic and biopharmaceutical properties. Hence there is need to develop a suitable drug system that distributes the therapeutically active drug molecule only to site of action, without affecting healthy tissue or organ. Drug delivered can have significant effect on its efficacy. Some drugs have an optimum concentration

Polymers for Colon Targeted Drug Delivery

Successful delivery of a drug to the colon requires protection of the drug from degradation or release in the stomach and then controlled release of drug in colon[3,4]. The desired properties of colon targeted drug delivery systems can be achieved by using some polymers either alone or in a combination because it is now recognized that polymers

COLON TARGETED DRUG DELIVERY CURRENT AND NOVEL

Colon Targeted Drug Delivery Approaches: Primary Approaches:; pH Controlled release: In pH controlled release systems, the different pH of human GIT is exploited by coating the dosage form with pH dependent polymers which remains as such in the upper GIT and degrade in the large intestine where the pH is high i.e., 7-8. This approach can be used in any dosage form such as tablets, capsules
