### **Dynamic Simulations of Electric Machinery Using MATLAB**

Everything you need to use MATLAB and SIMULINK for interactive modeling. With today's personal computers, students have the power to create simulations of electric machinery that allow them to study transient and control performance and test conceptual designs. The outcome of these simulations can reveal behaviors that may not have been readily apparent from the theory and design of the machines.

### **Dynamic Simulations of Electric Machinery Using MATLAB**

Learning for the first time how an electrical machine works is newer easy, but how hard it is, depends a lot on the form of teaching. Professor Dr. Chi-Mun Ong has done an exelent work on how firstly to model the basic electrical machines (DC-motor, induction motor and synchronous motor) and secondly how to model the motors in a dynamic system.
